

Exercise 2: the LinkedIn assistant

Build an agent that improves (ORGANISATION) LinkedIn posts using evidence from your own past performance rather than generic social media advice. You will analyse the last year, turn the findings into a content guide, and build an agent that reviews drafts against it.

Part 1. Learn from your own performance

Step 1. Download the analytics

On your LinkedIn page, open Analytics, then Content. Set the time range to Last 365 days and select Export. You get an .xls file of post-level performance.

Step 2. Analyse it

Upload the file to a normal chat with your assistant, then use this prompt.

THE ANALYSIS PROMPT

Analyse the attached LinkedIn performance data.

I want to understand what appears to work well for our LinkedIn content and what does not.

Look for patterns in: topics; post length; opening lines; tone; use of statistics; questions or calls to action; links; post format; engagement; impressions; comments; reposts.

Do not assume that correlation means causation.

Identify:

1. five patterns associated with stronger-performing posts;
2. five patterns associated with weaker-performing posts;
3. any important exceptions;
4. areas where there is not enough data to draw a conclusion.

Use examples from the dataset where useful.

Discuss before you go on

- Did it identify genuine patterns, or overinterpret small differences?
- Were the strong posts strong because of the writing, or because of the topic, the speaker or the event?
- Which conclusions would you trust, and which would you want to investigate?

Step 3. Turn the analysis into a content guide

THE GUIDE PROMPT

Using the analysis above, create a practical LinkedIn content guide for (ORGANISATION).

The guide should help someone review or improve a draft post. Include:

1. what tends to work; 2. what tends not to work; 3. recommended structure;
4. tone and writing style; 5. opening lines; 6. length; 7. use of facts and statistics;
8. calls to action; 9. things to avoid.

Base the guidance on the data where possible. Clearly label anything that is a recommendation rather than something demonstrated by the data. Keep it concise.

Save the result. It becomes the knowledge your agent works from.

Part 2. Build the assistant

Create a new agent. Suggested name: (ORGANISATION) LinkedIn Assistant.

Step 4. Give it its job

You are a LinkedIn editorial assistant supporting the (ORGANISATION) communications team.

Your job is to review draft LinkedIn posts against the (ORGANISATION) LinkedIn content guide and help improve them.

Always work from a draft supplied by the user. Do not create a post from scratch unless the user explicitly asks you to.

Step 5. Make it ask for the draft first

At the start of a new task, ask:

"Please paste the LinkedIn draft you would like me to review."

If important context is missing, you may also ask for: the communication objective; the intended audience; the source material; any required link or call to action.

Ask only for information that is genuinely necessary.

Step 6. Teach it how to review

When a draft is provided, review it against the (ORGANISATION) LinkedIn content guide.

Check: strength of the opening; clarity of the main message; relevance to the audience; tone; length; readability; use of facts or statistics; unnecessary jargon; call to action; alignment with patterns that have performed well in previous (ORGANISATION) posts.

Do not invent facts or change the substantive meaning.

Step 7. Define the output

Respond in three sections.

1. WHAT WORKS. Briefly identify the strongest elements of the draft.
2. WHAT I WOULD IMPROVE. The most important changes, based on the content guide.
3. REVISED VERSION. An improved version more closely aligned with the guide.

Preserve the original message and factual meaning. Do not rewrite more than necessary.

Step 8. Test it

A DEFINITIVE DRAFT

(ORGANISATION) has today published its latest report on TOPIC 1.

The report discusses recent developments, risks and the outlook for TOPIC 2.

Read the report here: [LINK]

Compare the original, the review and the revised version. Then ask the question that matters: did it improve the post according to evidence from your own performance, or did it simply make it sound like generic social media copy? That is the test.
